Sole Source Information

Coplogic, Inc. has designed and built an Online Reporting System for Police Departments that provides data to a specified database structure. The Online Reporting System uses the J2EE standard. The system is designed to gather information on crimes from a member of the general public (user) via an SSL connection. The system does not rely on cookies or user permissions. The application will issue a temporary report number to the user and place the temporary report into an administrative holding area for review and modification by appropriate administrator. An email is generated to the user that the report has been submitted. The administrator logs in via an SSL connection approves rejects, edits or prints reports as appropriate. Rejecting a report deletes it from the system and sends an appropriate email to the citizen. Approving the report issues a number, places it in a cue to be exported, and sends an appropriate email to the user. The administrator can download the approved report or print the report out. The application will verify addresses against an agencies geo-file in order to confirm the incident occurred within the agencies jurisdiction. Coplogic includes the interface to the Records Management System as part of the program based on the agency needs.

The program is designed to allow the dynamic creation of crime types and incidents within the administrative area. The administrative area allows for the activation of a supplemental reporting system to allow citizens to submit supplemental type reports as well as property lists to the agency. The administrative area allows the agency to set several IP based features and security measures. Automatic routing of each incident type can be done in the administrative area. The program is distributed with the ability for the agency to allow citizens to choose several languages including English, Spanish, French, Chinese and Simplified Chinese in which to read instructions and this information is dynamically configurable. The program also allows the agencies to add to additional languages of their choosing. The program provides a separate secure filing area and

login to allow agency-designated personnel such as certain security guards etc. to login and file dynamically created agency report types, which do not have to be offered to the general public. The program accounts for all reports as well as any edits made to reports by reviewers.

There is not currently any program available that has the features, abilities or security features of Coplogic's Desk Officer Online Reporting System. The Desk Officer Online Reporting System is the wholly owned, intellectual property of Coplogic, Inc. and is not available from any other vendor or reseller. Coplogic, Inc. does not use a distributor and only sells directly to customers.
