Subject: RE: Vactor Approval

Sean,

I pray this is sufficient to approve this – the other issue not raised is the fact that we can now get this in CNG under the STS – the CNG engine is dated in a few days and Vactor does not have a remedy for CNG to date – in other words this would help to expedite the purchase of a Vactor unit and it will be CNG, if you approve.

Thanks for your help,

Kelly W Reagan

Subject: Vactor Approval

Sean,

We currently have 14 Vactors. In an effort to maintain consistency we want to stay with the Vactor. The Vactor has the only jet water pump design that is capable of 100 gpm at a variable flow and pressure at a slow speed. We would appreciate your review of our request to purchase this off of State of Ohio STS contract.

Thanks
Mike
