Sole Source Information for Columbus, OH Police Department

LexisNexis® Coplogic Solutions has designed and built an Online Reporting System for Police Departments designed to gather information on non-violent, no suspect crimes from members of the general public (Users) via a 128 bit encrypted SSL connection.   The Online Reporting System uses the J2EE standard.   The system does not rely on cookies or user permissions. The application will issue a temporary report number to the Users and places the temporary report into an administrative holding area for review and modification by the appropriate administrator within your department. An email is generated to the Users once the report has been submitted. The administrator logs into the system via a 128 bit encrypted SSL connection to approve, reject, edit or print reports as appropriate. Rejecting a report deletes it from the system and sends an appropriate email to the citizen. Approving the report issues an official case number that is pulled from an upper-block of reserved case numbers, places it in a queue to be exported, and sends an appropriate email to the user. The administrator can download the approved report or print the report out.

The program is designed to allow the dynamic creation of crime types and incidents within the administrative area. The administrative area allows for the activation of a supplemental reporting system to allow citizens to submit supplemental type reports as well as property lists to the agency. The program is distributed with the ability for the agency to allow citizens to choose several languages including English, Spanish, French, Chinese and Simplified Chinese in which to read instructions and this information is dynamically configurable.   The program also allows the agencies to add additional languages of their choosing.   The program provides a separate secure filing area and login to allow agency-designated personnel such as loss prevention officers etc. to login and file dynamically created agency report types, such as a shoplifting report, which do not have to be offered to the general public.

There is not currently any program available that has the features, abilities or security features of the LexisNexis Desk Officer Reporting System ("DORS"). DORS has the ability to interface with most Records Management Systems (RMSs). DORS is the wholly owned, intellectual property of the LexisNexis® Company and the provisioning of license, support and maintenance services for the Desk Officer Reporting System is not available from any other vendor.
