RE: <u>Sole Source Supplier Applied Biosystems™ Instruments, Consumables and Software for Human Identification</u>

Dear Valued Customer:

Thank you for your interest in Thermo Fisher Scientific's Applied Biosystems™ brand of instruments, software and consumables for Human Identification. Please accept this letter to document that Thermo Fisher Scientific is the sole manufacturer and distributor of the Applied Biosystems Genetic Analyzers, real-time PCR thermal cyclers, thermal cyclers, Ion TorrentNext Generation Sequencing Systems and associated software as detailed in Table 1.

Genetic Analyzers, Ion instruments, real-time PCR thermal cyclers and Converge software contain a dedicated computer that is customized to operate the system and is compatible with our software. The computers attached to these systems are imaged specifically for Thermo Fisher Scientific and are not available from another source.

The Applied Biosystems Genetic Analyzers are the only commercially available 4, 8, and 24 capillary systems that have been validated according to SWGDAM guidelines to analyze DNA samples for the purpose of Human Identification. In addition, Thermo Fisher Scientific is the sole distributor of validated system consumables including capillaries, cartridges, chips, polymer, buffers, size standards and replacement parts as detailed in Table 2. Only Thermo Fisher Scientific factory trained, and certified engineers are authorized to service these instruments.

Further documentation describing the unique specifications of the Applied Biosystems brand of genetic analyzers and thermal cyclers can be found on the Thermo Fisher Scientific website, including user manuals.

In addition to Applied Biosystems instruments and software, Thermo Fisher Scientific is the sole manufacturer of all Applied Biosystems consumables, including kits for sample

preparation, quantitation, and amplification as described in Table 3. Furthermore, Life Technologies is the sole authorized distributor and supplier within North America of such products.

This information should justify Thermo Fisher as "Sole Source" supplier for all Applied Biosystems instruments, software, consumables, and services that you need to perform DNA Analysis, for the purpose of Human Identification. Please note that the SKU's in the tables are not exhaustive but represent the key sole source products in our portfolio.

In addition, we are pleased to provide Thermo Fisher Scientific Human Identification Professional Services (HPS) group. HPS provides consultancy and validation services for Human Identification applications with expertise focused on the extensive line of the Applied Biosystems™ brand of instruments, software, and consumables. The HPS team combines extensive internal technical product knowledge with vast experience in forensic laboratory validations across a global team to customize end-to-end solutions for laboratories. The HPS team has completed hundreds of projects since 2007 that include many combinations of the Applied Biosystems products listed above.

The HPS team is comprised of forensic scientists with broad and extensive validation experience for forensic DNA applications. Validation project work at customer laboratories is performed by Thermo Fisher Scientific Validation Application Specialists (VAS), who have all worked as forensic scientists and understand the workflow, standards, attention to detail, and unique needs of forensic DNA laboratories. External consultants with the relevant qualifications and training may also be involved in some areas of the validation project.

We appreciate your business and request that if you have any further questions that you contact me directly.

Regards,

A.Snape

Adam Snape

Associate Director, Product Management
