Subject: RE: Rebid of Loader at Compost

To be clear, 11 degrees was previously found to not be acceptable by Compost and the spec submitted requires 12 degrees of oscillation.

The prior bid included a question from a vendor specifically asking if their 11 degree design could not be disqualified as it did not decrease the loader's performance. The response was to bid as specified.

Is the agency willing to revise the specification to accept loaders with a minimum of 11 degrees of oscillation or do you maintain that only 12 degrees is acceptable?

.....
