5. **A full description of all work to be performed including a full description of work to be performed during any known phasing of the contract.**

This project will develop, design and provide engineering services during construction for the City's Moler street overflow intercepting sewer project. The overflow interceptor sewer will convey Moler street regulator combined sewer overflows and south side interceptor sewer wet weather flow directly into OARS tunnel thru Shaft 3.

Services will include: field activities to obtain design data, development of a design report, prepare detailed plans and specifications, easements, permits, bid documents, public outreach & coordination activities and provide engineering services during construction.

6. **A narrative timeline for the contract including a beginning date, beginning and ending dates for known phases of the contract and a projected ending date.**

Design activities will begin in September 2016 with preliminary design report to be submitted in March 2017, design plans and bid documents will be complete at the end of 2019 plus engineering services during construction thru 2020.

7. **A narrative discussing the economic impact or economic advantages of the project; community outreach or input in the development of the project; and any environmental factors or advantages of the project.**

This project was identified in the City of Columbus Integrated Plan and 2015 WWMP Update Report which was developed with input from various stakeholders and submitted to Ohio EPA.

This project will mitigate combined sewer overflows into the Scioto River from the Moler street combined sewer regulator and provide wet weather relief of the South Side interceptor Sewer.

Short term economic impacts will be in terms of the prime and six sub consultants design work on the project.
