5. **A description of work performed to date as part of the contract and a full description of work to be performed during any future phasing of the contract. The planning area should also be listed as well as any street or neighborhood names.**
The purpose of this Project is to perform additional sewer condition assessment of the Big Walnut Outfall in order to gain a better understanding of the corrosion damages, debris accumulation and structural integrity of the pipes. This work will take place in the Rickenbacker planning area.
6. **An updated contract timeline to contract completion.**
It is anticipated that the renewal portion of the contract will take 1.5 years to complete
7. **A narrative discussing the economic impact or economic advantages of the project; community outreach or input in the development of the project; and any environmental factors or advantages of the project.**

This project is part of our required consent order program to assess all large diameter sewer trunks. By completing these investigations it will allow the City to have a better

understanding of the system and create an accurate prioritization of necessary repairs. Said repairs will extend the useful life of the sanitary system, reduce the risk of damages due to failure and reduce maintenance costs.

8. A description of any and all renewals to date including the amounts of each modification and the Contract Number associated with any modification to date. (List each modification separately.)

There have been no renewals to date for this contract.

9. A full description of the work to be performed as part of the proposed contract renewal. (Indicating the work to be a logical extension of the contract is not sufficient explanation.)

The renewal scope includes additional investigations to conduct man entry inspections, insitu testing and sampling of the materials to better understand the current conditions and create a more accurate degradation curve. Due to the flow and air conditions within this sewer, a majority of this work will be completed by a specialty diving subcontractor. Once the sampling/testing is completed, Stantec will update and finalize the findings report so that the data can be entered into SCREAM for prioritization.

10. An explanation of why the work to be performed as part of the contract renewal cannot be bid out. (Indicating the work to be a logical extension of the contract is not sufficient explanation.)

Due to the scope of the project, much of the information and data that has already been gained by the consultant as part of this project would be lost. It would be costly to bring another firm up to date on the current conditions, access points and areas of concern.

11. A cost summary to include the original contract amount, the cost of each renewal to date (list each renewal separately), the cost of the modification being requested in the legislation, the estimated cost of any future known modifications and a total estimate of the contract cost.

Original Contract:	\$1,255,706.74
Renewal:	\$ 360,295.18
TOTAL:	\$1,616,001.92

12. An explanation of how the cost of the renewal was determined.

The costs for the renewal were determined through negotiations with the consultant based on the proposed scope or work.

13. Subconsultant information
