2. ECONOMIC IMPACT/ADVANTAGES; COMMUNITY OUTREACH; PROJECT DEVELOPMENT; ENVIRONMENTAL FACTORS/ADVANTAGES OF PROJECT

In 2019 the City of Columbus Division of Sewerage and Drainage (DOSD) initiated a program to assess the debris accumulation and structural integrity of the City’s large diameter storm sewer infrastructure. Phase 3 of this assessment program is primarily situated in the northern portion of the City, in the area roughly bounded by Lane Avenue to the south, SR-315 to the west, Morse Road to the north, and Cleveland Avenue to the east.

It is anticipated that approximately 100,000 LF of large diameter storm sewer infrastructure will be assessed as part of this project. Based on the existing record plan information, the sewers are constructed of varying materials, with diameters ranging from 38- to 144-inches. This project will enable the City to systematically inspect and rehabilitate its large diameter storm sewer infrastructure.
